

## Caravan Conquest - Rules

### Objective

Be the first player to reach the Finish with the most valuable goods, equipment and gold.

### Game Setup

1. Create the map from the provided tiles, by placing them in a grid, so that the Finish tile can be reached from the Start tile.
  - You can experiment with different map layouts and make every game unique!
2. Place the treasure on some of the reachable tiles of the map.
3. Give each player a basic pair of draft animals and a caravan. Also give each player some starting amount of resources and gold.
  - The recommended starting gear is:
    - *Basic Caravan*
    - *2x Donkey*
    - *10 Gold*
    - *10 Spice*
    - *5 Silk*

However, you can try experimenting with these, too!

### Gameplay

1. **Turn order:** Players take turns in clockwise order.
2. **Movement:**
  - On your turn, you can move your caravan each step to one of the 4 neighboring tiles, unless it's a River (see Tile Types and Effects). You cannot end up on the same tile you started your turn from.

- The amount of steps you can make, or your **Total Movement Speed**, depends on your **Base Speed**, tile effects, and current load.
- Your **Base Speed** is equal to the minimum speed of both of your draft animal's speeds.
- Your **Total Speed** is decreased by 1 if you are carrying load over your carrying capacity. Your speed further decreases by 1 for every 10 units over the capacity.

*Example: Your caravan has the capacity of 120 units. One of your horses has 5 speed and the other has 4 speed. Your **Base Speed** is then 4. However, you begin your turn on a desert tile, so your total speed is decreased by 1. Furthermore, your current load is 125, 5 units over your carrying capacity, further decreasing your speed by 1. Therefore, your **Total Movement Speed** is 2.*

### 3. Tile Encounters:

- You interact with a tile only when you end your turn on it, not when you are moving through.
- On the end of your turn, draw an encounter card from the encounter deck corresponding to the tile type you are standing on.
- Trade Camps: Trade goods for gold, or vice-versa.
- Cities: Buy or sell equipment with gold (see Resource and Caravan Management).

4. **Special encounters:** draw a special encounter at the end of your turn.

5. **Treasure:** Collect the treasure. Treasure is a special resource that cannot be traded during the game, but weighs only 1 unit and is worth 40 gold.

## Tile Types and Effects

Each tile type has its own effect and special encounters.

Consult the Legend sheet for regular tile effects that apply every time. Some tiles can even affect your movement speed on the next turn, so read closely!

For different tile types there are decks of cards containing special encounters. You draw from one of these decks at the end of your turn, depending on which tile you are on. The encounter card takes effect immediately, unless the card itself specifies otherwise.

## Trading

There are two types of Trade camps:

1. Silk - in this Trade camp, you can trade 1 silk for 10 gold.
2. Spice - in this Trade camp, you can trade 1 spice for 5 gold.

## Resource and Caravan Management

- Upgrade your caravan to increase your carrying capacity.
- You can buy better draft animals to increase your movement speed and gain special improvements.
- Once owned, any equipment or animal's worth becomes the half of its original price<sup>1</sup>. You can sell the equipment for this price in gold<sup>2</sup>.

<sup>1</sup>In case the half is not a whole number, it is rounded down to the closest integer.

<sup>2</sup>You must always have exactly two draft animals and one caravan.

## Winning the Game

- The game ends when all players reach the Finish tile, or after 10 turns have passed since the first player has finished.
- After the first player reaches the Finish:
  - The value of each resource decreases by 1 each turn
  - A countdown starts: 10 turns are left until the game ends
- **End of the Game:**
  - Players who have not reached the Finish tile automatically lose, with their total wealth being zero.
  - Count your goods and gold; the player with highest total wealth wins!
